### USER MANUAL YUGO | 38.173.90

#### Product parameters:

Item No. : YUGO | 38.173.90  
Input: 5V - 1A  
Input interface: Type-C  
Battery capacity: 1200 mAh  
Power: 2 - 5 W  
Standard: GB4706.1,GB4706.27

1. Press the switch briefly for the first time. When the fan turns on, it will start at the first speed. The blades will rotate clockwise, and the display screen will show the first speed for 2 seconds. After seconds, jump to battery level/display. Press the switch briefly for the 2nd, 3rd, 4th, and 5th times, and turn on the 2-3-4-5 gear in sequence. The wind speed will gradually reach its maximum. Press the switch briefly for the 6th time, turn off the power, and the blades stop rotating. Cycle in sequence.
2. During fan operation, press and hold the switch for 2 seconds at any time to shut down the fan.
3. Use a DC5V1A power adapter to charge the Type-C port. The charging process will display. The green cursor flashes on the screen, and the battery level shows a change of 1-100. It takes about 3 hours to fully charge.

#### Precautions:

1. Do not use this product in damp environments, as contact with water may cause fogging and component failure.
2. Do not knock on this product. Repeated knocking may cause foggy parts to land.
3. Do not expose this product to fire. To prevent the battery from being subjected to strong high temperatures and causing slight explosions.
4. Avoid contact with children and pets.

### UPUTSTVO YUGO | 38.173.90

#### Specifikacije proizvoda:

Ident: YUGO | 38.173.90  
Ulaz: 5V - 1A  
Tip ulaza: Type-C  
Kapacitet baterije: 1200 mAh  
Snaga: 2 - 5 W  
Standard: GB4706.1,GB4706.27

1. Pritisnite dugme za paljenje kratko prvi put. Kada se ventilator uključi, počće da radi na prvoj brzini. Krilca će se okretati u smeru kazaljke na satu, a ekran će prikazivati prvu brzinu u trajanju od 2 sekunde. Nakon toga, prikaz će se automatski prebaciti na nivo baterije. Kratkim pritiskanjem prekidača drugi, treći, četvrti i peti put aktiviraju se brzine 2, 3, 4 i 5 redom. Brzina vetra će postepeno dostići maksimum. Pritiskom na dugme šesti put isključuje se napajanje i krilca prestaju da se okreću. Ciklus se zatim ponavlja.
2. Tokom rada ventilatora, pritisnite i držite prekidač 2 sekunde u bilo kom trenutku da biste isključili ventilator.
3. Koristite DC5V1A adapter za napajanje kako biste punili uređaj. Tokom punjenja, na ekranu trepće zelena oznaka, a nivo baterije se postepeno prikazuje od 1 do 100. Za potpuno punjenje potrebno je oko 3 sata.

#### Preventivne mere:

1. Ne koristite ovaj proizvod u vlažnim okruženjima, jer kontakt s vodom može izazvati zamaglivanje i kvar komponenti.
2. Ne udarajte ovaj proizvod. Kontinuirano udaranje može izazvati oštećenje i pojavu zamagljenih delova.
3. Ne izlažite ovaj proizvod vatri, kako bi se sprečilo izlaganje baterije visokim temperaturama i mogućim manjim eksplozijama.
4. Izbegavajte kontakt sa decom i kućnim ljubimcima.
