TEST REPORT

№ RN 27120 / 14.08.2020

Tests of lighters, according to requirements of EN 13869:2016 “Lighters - Child safety requirements for lighters - Safety requirements and test methods”

Description of lighters:	Flint plastic gas lighters, disposable, in blue colour and transparent fuel tank, manufacturer model: HP-01, client number: 21.004 DOMINO, 21.005 DOMINO HD, 21.006 DOMINO WHITE, 21.007 DOMINO SOFT, 21.008 DOMINO METALLIC, 21.009 DOMINO CLEAR, dimensions 80.64/12.00/23.48 mm, manufacturer number:43168
---------------------------------	---

Photos of lighters:

Name of the producer (origin):	Hunan Dongyi Electronics CO., LTD - CHINA
Applicant:	PUBLIK D.O.O.
Address:	Vladike Nikolaja 469,14000 Valjevo, Serbia
Contact details:	Tel. +381607080236, e-mail: jelena.stankovic@publik.net
Method of arrival of test item:	Via courier company USP - No 1ZX3247R0490285193
Date of arrival of test item:	23 June 2020

Organization, conducted the test:	TESTING CENTER GLOBALTEST (IC Globaltest Ltd.)
Address	31 Krushovski vrah Str., 1618 Sofia city, Republic of Bulgaria
Telephone:	(+359) 700 20 661
Email:	office@globaltest-bg.com
Tests conducted by:	See section 2 of this report
Normative reference:	EN 13869:2016 “Lighters - Child safety requirements for lighters - Safety requirements and test methods”
Application for testing:	RN 27120 /23.06.2020
Period of testing:	From 03 July 2020 to 14 August 2020

Previous tests:	Successful passed test, according to ISO 9994:2018 „Lighters – Safety specification (ISO 9994:2018)”.
Submitted test report from previous test:	Test report No RN27118 from 03 July 2020, issued by TESTING CENTER GLOBALTEST (IC Globaltest Ltd.)

ACCORDING TO THE TESTS PERFORMED, SHOWN ON THE NEXT PAGES, THE FOLLOWING CONCLUSION CAN BE MADE:

Flint plastic gas lighters, disposable, in blue colour and transparent fuel tank, **manufacturer model: HP-01**, client number: 21.004 DOMINO, 21.005 DOMINO HD, 21.006 DOMINO WHITE, 21.007 DOMINO SOFT, 21.008 DOMINO METALLIC, 21.009 DOMINO CLEAR, dimensions 80.64/12.00/23.48 mm, manufacturer number:43168,

CONFORM TO THE REQUIREMENTS OF

EN 13869:2016 ‘Lighters – Child-resistance for lighters – safety requirements and test methods’.

Manager of IC Globaltest:
/ Dimitar Tanev, Dipl. Eng. /

TEST REPORT

1. Description of the lighters, used for the test with child

For conducting this test, surrogate lighters are used, which represents lighter, identical to the original one; the surrogate lighter has no fuel and does not produce flame. It can produce a signal, such as a “click”, which shows that the surrogate lighter is active and is in a flame-producing mode.

For this test 6 surrogate lighters have been prepared, labelled with sequential numbers 1 to 6, as shown in the picture.

For conducting the test, six surrogate lighters with numbers from 1 to 6 are used, according to section 5.5 from EN 13869. All the six surrogate lighters are used an equal number of times in panel of 2 children for the entire test forming the whole 100 children panel.

In case that the surrogate lighters 1 to 6 incl. are damaged or out of use during the test, other surrogate lighters have to be used.

Before conducting the test each surrogate lighter was checked for capability of producing a signal.

After the test, the surrogate lighters will be kept 3 (three) years in TC Globaltest archives.

2. Persons, conducting the test /testers/

Five persons conducting the test are involved, supervised by a leader. All of the persons are at least 18 years old and are fluent in Bulgarian language, according to section 5.4.3. of the standard.

All the persons, involved in the test, are IC GLOBALTEST Ltd. employees.

The leader of the test is Dimitar Tanev, IC GLOBALTEST manager.

3. Place for conducting the test

For conducting this test, a panel of 100 children is used, situated in Sofia city and in Pazardjik city, Republic of Bulgaria.

The test was conducted in a room that is familiar to the children, well-lit and free from distraction. This room allowed the children to move free. The sitting places of the children are considered with the children's size so they can feel comfortable, according to the requirements of section 5.4.2. of the standard.

4. Children, participating in the test

Written informed consents, allowing the children to participate in the test, were obtained from their parents or legal guardians before the test. All informed consents will be kept 3 (three) years in TC Global test archives.

For conducting this test, children aged from 42 to 51 months participated - boys and girls, divided according to 5.3 by EN 13869.

The Bulgarian language is native language for all the children, participating in the test. No child with a permanent or temporary illness, injury or handicap was selected for participation in the test.

During the test, none of the children declined to participate. No child participated in more than one test and no child participated in more than one test during one day. Number of children participating in the test – 100 children.

5. Conducting the test

The persons, conducting the test, are trained to encourage the children and to talk with them with a friendly tone. The language used during the tests is Bulgarian. The testers explain to all of the participants that the test is not a game. Encouragement of the children was done according to section 5.6 of the standard.

The test was performed in a two groups of children. The testers and persons familiar to the children

Regarding the the announced epidemic situation in the Republic of Bulgaria related to Covid 19, the test was conducted in the yards of kindergartens (as no external persons were allowed in the buildings of the kindergartens). A distance of one and a half meters was observed between the participants and the testers. The contact was limited to the submission of test specimens, and the replacement lighters were disinfected before each group of children. All children were calm and listened the explanations of tester with interest.

For the purpose of this test, a registration file for all the participants were prepared. The file contains the following data: sex, date of birth, age in months, the number of the lighter, used by the child, the name of the person who conducted the test and the name of the leader. All the data was filled after finishing the test with each of the panel, so the children could not disperse during the test. The photographs were also taken during the test in a manner to hide the face of children and not to distract them. Registration files of the participants will be kept in the IC GLOBALTEST archives.

The position of the tester is according to requirements in the standard.

Before beginning of the test the children were asked to listen carefully the instruction of the tester.

The procedure was performed according to section 5.8. of the standard.

After the explanation, the surrogate-lighters were distributed to the children. The testers gave the children a five minute period to try to produce a signal with the surrogate-lighters. Those, who succeeded, were asked to return the lighters and wait until the other children are finished. Those, who failed in producing a signal in the first 5 minutes, were given another 5 minutes to conduct with the surrogate-lighters. At the end of the second 5 min test period nine of the children succeeded in producing a signal.

During the test period, the children were not allowed to operate with other children's lighters.

Flint plastic gas lighters, disposable, in blue colour and transparent fuel tank, manufacturer model: HP-01

After the test, the children were told that operating with lighters is dangerous, but these are special lighters that do not produce fire, and could not harm them or burn them. The testers asked the children to promise that they will never try to produce a signal with a real lighter. The testers waited for an affirmative response from each child and then thanked the children for helping.

6. Test results

In the 100-child test panel – **seven** children demonstrated successfully operating with surrogate lighters. That is 7 % of all participants, which eliminates the need for conducting the test with a second 100-child panel.

- Child of age 50 months, male – successfully on the 108 sec;
- Child of age 50 months, male – successfully on the 122 sec;
- Child of age 51 months, male – successfully on the 95 sec;
- Child of age 51 months, male – successfully on the 134 sec;
- Child of age 50 months, female – successfully on the 139 sec;
- Child of age 51 months, female – successfully on the 97 sec;
- Child of age 51 months, female – successfully on the 141 sec;

The lighters substituted by surrogate lighters conforms to child-resistant standard and the test is successful.

Persons, conducting the test /testers/

Dipl. Eng. Boryana Dimitrova, Dipl. Eng. Yana Georgieva, MChem. Ivan Givechev, MChem. Evelina Milenova, Emil Mitev

Leader of the test: Dipl. Eng. Dimitar Tanev
